Introductory Letter

Firstly thank you for choosing Synergy in Creation.

Secondly, but more importantly;

Congratulations on taking your first steps towards becoming self sustained, independent.

This technology will be one of the best investments you'll make for your home.

It basically pays for itself; a true investment with real returns.

We currently have huge specials on the following:

Our 3KW base system - Even if you take it on finance, it will work out to R751* per month (R1-17c per unit) for a home using 643kWh per month.

Or our 4KW base System Even if financed, it will work out to R930* per month (R1-14c per Unit) for a home using 817Kwh per month.

Compared to R1-49 per KWh, you will be paying to Eskom from 1 Jul 2012

Not only will you be paying less than your current rate per KWh, your home will gain R100k+ in value once you install solar.

It's literally a choice of:

Whom would you rather pay?

You can either pay Eskom for years;

At the end of the day, you'll still be...just another loyal, paying *customer* of Eskom.

What will you have to show for it?

Eskom receipts... and don't forget...

Memories of energy well spent...

On the other hand;

You can invest in your own Solar Electric System.

At the end of the day you will have:

Your own Solar Electric system – paid in full – which will also add value to your home.

Ask yourself; which home would you rather buy?

A home with a full PV system (producing its own electricity); or
a 'normal' house with monthly Eskom bills.

Your home will be more valuable.

Furthermore, you get the pleasure of generating your own electricity and not paying a cent for it –
because you've already paid for the equipment!

Plus, you will be doing your part in conserving our Planet.

You will be lowering your carbon footprint and making use of renewable energies, not fossil fuels!

You are currently investing this money (on a monthly basis) via your contribution towards Eskom
and fossil fuels.

Question is: what return will you get from your investment?

This technology progressed and revolutionized over the decades; since President Carter put the
first solar panels on the White house in the 1970s.

This technology and application broadened to fit almost every electrical application in our lives;
from powering satellites to "bobble-heads" in your car...

We have gone through every effort to save cost on our systems – Yet without compromising on
exceptional quality; which is our highest priority.

We want you, to be independent - supplying your own energy.

We've got various standard packages; however we want to supply you something tailor made that
can suit both your application and your pocket.

Let's get you running on solar energy and investing into your own home - as opposed to funding
Eskom.

Contact us; let us know your requirements.

Let us bring - Synergy to your life

Regards

Ben Graham van der Sandt
